Professional power systems equipment for renewable energy, back-up power and vehicle applications

## Introduction

TBS Electronics BV (TBS) is a privately owned ISO 9001:2015 certified Dutch company founded in 1984. TBS can best be described as an engineering driven family business. It all started with the design and production of toroidal transformers, followed by electronics and software design in the early nineties.

Until 2006, TBS mainly operated as an Original Design Manufacturer (ODM) for other companies. But after that, our focus was shifted towards designing and marketing TBS branded equipment. Over the past years we have successfully worked on a comprehensive lineup of power conversion and instrumentation products, intended for use in independent power applications. All designed and manufactured in The Netherlands.

Our current product lineup consists of professional sinewave inverters, battery chargers, inverter-charger combinations, battery monitors and DC protection or distribution products. All these products have an excellent reputation for reliability and innovation. In the coming years we will further expand and optimize our product portfolio.

DC to DC converters Automatic Charging Relay Battery Protect Relays

# Powersine true sinewave inverters

#### Provides pure sine wave AC power from a DC source

More than 20 years ago, TBS introduced the first Powersine true sinewave inverter that offered clean reliable power in a compact, yet affordable package. Since then our inverter lineup has evolved into a fine selection of different models, that are used worldwide in a wide variety of applications.

An inverter transforms the DC electricity stored in batteries into standard household AC power. With a Powersine inverter you don't have to rely on hard-to-find DC-powered appliances or a noisy generator to enjoy the comforts of home in your vehicle, RV or boat. Creating an independent mobile power system and providing silent AC electricity anytime, anywhere.

Powersine inverters are efficient and reliable and come in a variety of sizes and power ranges to meet just about any power need. We offer small models designed for lower power AC loads such as TV's, computers and electric tool chargers, plus high power units that provide electricity for larger installations in for example vehicles and boats.

#### Cleaner than grid power

With very low total harmonic distortion, a Powersine inverter delivers a true sine wave output that is identical or even better than the AC power supplied by the public grid. Grid power is more likely to fluctuate causing your lights to flicker. Sometimes the voltage may even drop down to a level that affects proper operation of your connected equipment. This is especially true for shore power outlets. Due to the perfect and stable AC output of a Powersine inverter, all such problems no longer exist and also helps to protect your equipment against failures, humming or interference.

## compromise

benefits like:

difficult loads reliability

Additionally, only first class components are used inside any Powersine inverter. Ensuring a long trouble-free lifetime. This is proven by the fact that large numbers of our first generation inverters are still in service today.

#### System design flexibility

Using a stand-alone inverter offers you all the freedom to choose the best battery charging source for your application. Determine the right current rating to match your battery capacity and desired charging time, or choose to charge from an alternator, the grid or the sun.

## Technology without

All Powersine inverters are built around the superior hybrid HF/LF technology using a single power stage and a very efficient toroidal transformer. This offers many

• Very high peak power delivery Low no-load power consumption Capable of powering the most • Less active components = higher

## Powersine 300-12, 350-24 and 450-48

#### Description

The PS300-12, PS350-24 and PS450-48 professional DC to AC true sinewave inverters, offer superior performance for a wide range of applications. Unlike many other inverters, the very clean and interference free output of a Powersine inverter ensures correct operation of sensitive equipment like displays, test equipment and battery chargers.

The very robust electronic and mechanical design, make the Powersine inverter series the best choice for reliability. Designed for an extremely long lifespan and protected against short circuits, overloading and high temperatures, a Powersine inverter will deliver trouble free operation for many years.

The newest available technology results in extremely efficient operation with very low 'no-load' consumption. The Automatic Standby Function (ASB), standard in all Powersine inverters, will even reduce the no-load consumption by an extra 70%!

Applications

• Recreational vehicles

• Marine applications

Solar power systems

• Mobile entertainment systems

Industrial systems

Service vehicles

• Remote homes

All Powersine inverters are easy to install and operate. Each Powersine inverter comes standard with DC cables and a very clear installation and operating instruction manual.

#### Features

- True sinewave AC output
- Robust design
- High surge power output
- Very efficient
- Protected against low battery voltage, high temperature, overload and short circuit
- Automatic Standby function to reduce no-load power consumption
- Variable speed fan for silent operation
- Schuko type AC outlet (other outlet types are optionally available)
- 1.5 meters DC connection cable included
- CE and e-mark certified
- 24 month warranty

#### Designed to power your...

- TV
- Computer
- Battery charger
- Portable work light
- Test & measurement equipment
- Smart phone charger • Thermal printer

## <sup>1)</sup> Measured wi decreasing a <sup>2)</sup> Undervoltag drop across o <sup>3)</sup> Measured at <sup>4)</sup> Also availabl

Note: the given specifications are subject to change without notice.

 <sup>1)</sup> Measured with resistive load at 25°C ambient. Power ratings are subject to a tolerance of 4% and are decreasing as temperature rises with a rate of approx. 1.2%/°C starting from 25°C
 <sup>2)</sup> Undervoltage limit is dynamic. This limit decreases with increasing load to compensate the voltage

drop across cables and connections <sup>3)</sup> Measured at nominal input voltage and 25°C

<sup>4)</sup> Also available are the following AC outlet types:

## Powersine

1000-12, 1400-24, 1600-12, 1800-24 and 1800-48

#### Description

The PS1000-12 up to PS1800-48 professional DC to AC true sinewave inverters, offer superior performance for a wide range of applications. Unlike many other inverters, the very clean and interference free output of a Powersine inverter ensures correct operation of sensitive equipment like displays, test equipment and battery chargers.

The very robust electronic and mechanical design, make the Powersine inverter series the best choice for reliability. Designed for an extremely long lifespan and protected against short circuits, overloading and high temperatures, a Powersine inverter will deliver trouble free operation for many years.

The newest available technology results in extremely efficient operation with very low 'no-load' consumption. The Automatic Standby Function (ASB), standard in all Powersine inverters, will even reduce the no-load consumption by an extra 70%!

• 1.5 meters DC connection

cable included

• 24 month warranty

CE certified

All Powersine inverters are easy to install and operate. Each Powersine inverter comes standard with DC cables and a very clear installation and operating instruction manual.

powersine 1000"12"

**SINEWAVE INVERTER** 

-0=

#### Features

- True sinewave AC output
- Robust industrial design
- High surge power output
- Very efficient
- Protected against high/low battery voltage, high temperature, overload, short circuit and high ripple voltage
- Automatic Standby function to reduce no-load power consumption
- Variable speed fan for silent operation
- Remote on/off capability
- Alarm relay
- Remote control capability via TBSLink
- Easy to access connection bay for installing AC-, DC and control wiring

## **Applications**

- Recreational vehicles
- Marine applications
- Solar power systems
- Industrial systems
- Mobile entertainment systems
- Service vehicles

Pleasured with resistive load at 25°C ambient. Power ratings are subject to a tolerance of 10% and are decreasing as temperature rises with a rate of approx. 1.2%/°C starting from 25°C

<sup>2)</sup> Undervoltage limit is dynamic. This limit decreases with increasing load to compensate the voltage drop across cables and connections <sup>3)</sup> Measured at nominal input voltage and 25°C

#### Accessories

- Universal Remote Control with LCD
- Basic Remote Control with LEDs
- TBSLink communication kit including software

Basic Inverter Remote Control, art # 5095200

Universal Remote Control, art # 5095500

ſ

TBSLink to USB Interface Kit, art # 5092120 (Includes TBS Dashboard for monitoring the Powersine inverters)

## Powersine

2000-12, 2500-24, 3000-12, 3500-24 and 3500-48

#### Description

The PS2000-12 up to PS3500-48 professional DC to AC true sinewave inverters, offer superior performance for a wide range of applications. Unlike many other inverters, the very clean and interference free output of a Powersine inverter ensures correct operation of sensitive equipment like displays, test equipment and battery chargers.

The very robust electronic and mechanical design, make the Powersine inverter series the best choice for reliability. Designed for an extremely long lifespan and protected against short circuits, overloading and high temperatures, a Powersine inverter will deliver trouble free operation for many years.

The newest available technology results in extremely efficient operation with very low 'no-load' consumption. The Automatic Standby Function (ASB), standard in all Powersine inverters, will even reduce the no-load consumption by an extra 70%!

All Powersine inverters are easy to install and operate. Due to smart connection bay mapping of AC, DC and control connectors, all wiring can be installed in a fast and logical way.

#### Features

- True sinewave AC output
- Robust industrial design
- High surge power output
- Very efficient
- Protected against high/low battery voltage, high temperature, overload, short circuit and high ripple voltage
- Variable speed fan for silent operation
- Remote on/off capability
- Alarm relay
- Remote control capability via TBSLink
- Easy to access connection bay for installing AC-, DC and control wiring
- Trigger input
- CE certified
- 24 month warranty

#### **Applications**

- Recreational vehicles
- Marine applications
- Solar power systems
- Industrial systems
- Mobile entertainment systems
- Service vehicles
- Remote homes

#### Accessories

- Universal Remote Control with LCD
- Basic Remote Control with LEDs
- TBSLink communication kit including software

<sup>1)</sup> Measured with resistive load at 25°C ambient. Power ratings are subject to a tolerance of 10% and are decreasing as temperature rises with a rate of approx. 1.2%/°C starting from 25°C <sup>2)</sup> Undervoltage limit is dynamic. This limit decreases with increasing load to compensate the voltage drop across cables and connections <sup>3)</sup> Measured at nominal input voltage and 25°C

# **BATTERY CHARGER**

# Omnicharge programmable battery chargers

#### Charge your batteries quickly and safely

More than a decade ago, the Omnicharge battery chargers set new standards by combining a true continuous duty capable power section, with almost unlimited programming capabilities. This made these units a popular choice for applications that require extensive daily bulk charging or specific charge programs to fit the connected batteries.

All Omnicharge battery chargers operate fully automatically, so that batteries, if desired, can always stay connected to it. The charger will automatically detect when a recharge is needed. Alternatively, it will also detect when a battery is fully charged, so that the charge voltage can be reduced in order to increase the battery's lifetime and avoid battery self-discharge.

The current Omnicharge lineup contains 12V chargers with 40A, 60A and 90A outputs, 24V chargers with 20A, 30A, 50A and 80A outputs and a powerful 48V charger with 40A charge capacity.

#### Switch mode technology done correctly

Having a long history in switch mode power supply design, we know all common pitfalls that can result in poor reliability, short product lifetimes, low efficiency and poor radio frequency interference performance.

Each Omnicharge battery charger is very carefully designed with great attention to detail. For example, PCB and capacitor hot spots are avoided to increase long term reliability and efficiency. All power semiconductor are properly decoupled for radio frequencies and are well over dimensioned. Internal thermal management is perfectly optimized to avoid the charge current to drop due to internal overheating.

Furthermore, each Omnicharge product is equipped with active power factor correction and smart internal rectifiers for optimal efficiency and a maximum charge current per AC Watt. A universal AC input on most models enables correct operation all around the globe and guarantees a maximum charge current even under low AC input voltage conditions.

# The best battery charger for every application

1.

All Omnicharge battery chargers are equipped with three outputs. This allows three battery banks to be charged at once. The high power Omnicharge models have three equal charge outputs that automatically redirect the available power to the lowest battery, for faster charging.

The medium power Omnicharge<sup>2</sup> models have three fully independent outputs. Each output has individually programmable charge voltages, currents and stages. This enables the possibility to charge a combination of different battery types and sizes by a single battery charger.

#### Lithium batteries

The use of Lithium Ion batteries is strongly growing in many different applications. Omnicharge battery chargers can seamlessly charge Lithium Ion batteries with the correct charging voltage. When the required charging voltage still differs from the standard available ones, these can be easily modified via the TBS Dashboard software or on the unit's display (Omnicharge<sup>2</sup> only). All chargers are also equipped with a remote shut down input, which can be used for allowing a Lithium battery BMS to stop the charging process.

## Omnicharge<sup>2</sup>

12-40, 12-60, 24-20 and 24-30

#### Description

The Omnicharge<sup>2</sup> 12-40, 12-60, 24-20 and 24-30 are fully programmable, three output, automatic battery chargers designed for professional applications. A clear backlit display shows the charge progress as well as the actual charge voltage and current for each output.

battery output setup. All outputs are not only isolated from each other, but these are also individually Omnicharge<sup>2</sup> battery chargers will deliver programmable. This enables the possibility to charge a combination of different battery types and sizes by a single battery charger.

> All Omnicharge<sup>2</sup> models are equipped with advanced temperature compensated charge programs, with or without a float stage. Standard available are

AGM, GEL, Flooded and Lithium charge programs. Each charge program can also be modified to different voltage and current levels in case the connected battery has special requirements. Also available is a 'Night Mode', which prevents the fans from spinning when absolute silence is desired.

All Omnicharge<sup>2</sup> units are easy to install and come standard with temperature sensor and a very clear installation and operating instruction manual.

#### Features

- Three full current outputs (Individually programmable)
- Robust industrial design
- Clear backlit display for easy readout and configuration

Combining the latest technologies and

power electronics design expertise, the

long life performance even in the most

demanding applications. Utilizing high

reduce running costs and guarantees a maximum charge current per AC Watt.

efficiency converter technology, will

A unique new feature of the Omni

charge<sup>2</sup> range is the autonomous

the best available parts with years of

- Designed for continuous duty charging Very efficient
- Universal power factor corrected auto ranging AC input
- No charge current derating at 115VAC input
- Protected against battery failure, high temperature, overload, short circuit, low input voltage and reverse polarity

- Protects the battery from
- being overcharged • Variable speed fan for low
- noise operation • Remote on/off capability
- (for interfacing to external BMS) • QuickLink communication port
- Night Mode for silent operation • Easy to access connection bay
- for installing AC-, DC and control wiring
- Temperature sensor included • CE certified
- 24 month warranty

## Omnicharge

12-90, 24-50, 24-80 and 48-40

## **BATTERY CHARGER**

#### Description

The Omnicharge 12-90, 24-50, 24-80 and 48-40 are fully programmable, automatic battery chargers designed for professional applications.

Combining the latest technologies and the best available parts with years of power electronics design expertise, the Omnicharge battery chargers will deliver long life performance even in the most demanding applications. A unique active rectifier output stage ensures unmatched efficiency figures. Combined with active PFC, the Omnicharge battery chargers are very energy efficient. This will reduce running costs and guarantees a maximum charge current per AC Watt. Up to six charger units can be connected in parallel, allowing synchronized charging with currents up to 540A. Three separate battery banks can be charged simultaneously, thanks to the triple output design.

All Omnicharge models are equipped with advanced temperature compensated charging programs for lead acid and lithium based batteries. Besides easily selectable standard charge

• Protects the battery from

• Remote on/off capability

• Alarm relay (optional Alarm Output

Expander available for additional relays)

• Remote control capability via TBSLink

• Easy to access connection bay for installing AC-, DC and control wiring

• Temperature sensor included

being overcharged

programs, users are also allowed to create a custom charging program using the TBS Dashboard software. The standard available TBSLink port enables connection to a number of accessories like the TBS remote controls.

All Omnicharge units are easy to install and come standard with temperature sensor and a very clear installation and operating instruction manual.

#### Features

to 8 stages

- Three full current outputs
- Robust industrial design
- Designed for continuous duty chargingVery efficient
- Universal power factor corrected auto ranging AC input
- Parallel capability up to 6 units
- Protected against battery failure, high temperature, overload, short circuit, low input voltage and reverse polarity (fuse)
- Multistage intelligent charging programs
- Programmable charging programs up
- programs up
   CE certified
   24 month warranty

#### Applications

- Recreational vehicles
- Marine applications
- Variable speed fan for silent operation Industrial systems
  - Mobile entertainment systems
- (for interfacing to external BMS) Service vehicles
  - Remote homes

TBSLink to USB Interface Kit, art # 5092120 (Includes TBS Dashboard for monitoring the Powersine inverters)

# Powersine Combi inverter/ charger units

TBS Powersine Combi integrates a powerful inverter, a smart charger and an AC transfer switch in one robust and compact enclosure. An ideal power station solution for caravan, RV, marine, off-grid solar and many more applications.

A Powersine Combi recharges the house batteries when AC power from the grid or a generator is available at the input. The device also allows any surplus AC power to pass through and power downstream AC loads, such as a television or microwave oven. When there is no AC power available, the unit inverts DC battery power into clean true sinewave AC electricity. All this is done automatically and the AC transfer switch operates extremely fast, not disturbing any AC loads connected to the output.

#### High performance

Using hybrid HF/LF power conversion technology in combination with an ultra-fast Digital Signal Processor, results in a high performance inverter/charger combination. Powersine Combi units are equipped with the fastest and most accurate phase lock system in the market, allowing it to even operate correctly with very poor generators as AC source. The conservatively rated inverter delivers clean true sinewave power and has a very large peak power capability. The powerful charger section guarantees fast charging times, but also offers great flexibility by allowing many charge profile parameters to be customized through the TBS Dashboard software.

#### AC Input Power Boost

The Powersine Combi offers many innovative features like AC Input Power Boost. When more power is required than the grid or generator can provide, the Powersine Combi will supplement the shortage by automatically activating the inverter. Once the peak power demand has passed, the Powersine Combi ensures that the battery is being recharged again. This, for example, allows the use of a smaller generator which reduces the overall system costs.

## Powerful Trigger-Action feature

cause a certain action.

10.16

20

An integrated power system solution is nothing without extensive programming possibilities. Besides configuring standard parameters like maximum charging current, shore current limit level etc., the Powersine Combi offers something unique called 'Trigger-Actions'. This is based on a so-called 'If This Then That' scheme, where a user selectable state, event or trigger can

For example, you can configure to ignore incoming AC grid power as long as the battery voltage is above a certain level. This way you can prioritize (solar charged-) battery power above the metered grid power. Or you can set the Powersine Combi into a silent 'night mode' when one of the physically available trigger inputs is active. This Trigger-Action feature allows almost countless scenarios to be programmed inside the Powersine Combi.

# **Powersine Combi**

1600-12-60 and 1800-24-35

#### Description

The PSC1600-12-60 and PSC1800-24-35 Powersine Combi products are based on the latest generation Powersine inverter engine, which guarantees very reliable operation and huge output power reserves. The Powersine Combi also features a powerful intelligent battery charger and an ultra fast AC transfer switch. All this is combined in a very compact, yet installer friendly unit.

The Powersine Combi offers many innovative features like AC Input Power Boost, which temporarily assists weak AC input sources when more power is needed than available. Another feature is AC Input Current Limit, which limits the maximum current consumed from the AC input source by the Powersine Combi in charger mode.

Furthermore, the Powersine Combi is equipped with a TBSLink port to connect to a remote control or to a Windows device running TBS Dashboard, for easy step by step configuration and readout.

Also available are a fully configurable alarm relay output and a unique trigger

• Variable speed fan for silent operation

• Remote control capability via TBSLink

installing AC-, DC and control wiring

• Easy to access connection bay for

• 1.5 meters DC connection cable

• Remote on/off capability

• Configurable alarm relay

Versatile trigger input

included

• CE certified

• 24 month warranty

input, that can convert external trigger commands into a number of Powersine Combi status changes.

**INVERTER / CHARGER** 

Each Powersine Combi comes standard with DC cables, a temperature sensor and a very clear installation and operating instruction manual.

#### Features

- True sinewave AC output
- Robust industrial design
- High surge power output
- Powerful 4-stage battery charger
- Power factor corrected AC input
- Fast AC transfer switch
- AC Input Power Boost
- AC Input Current Limit
- Protected against high/low battery voltage, high temperature, overload, short circuit, high ripple voltage and low AC input voltage
- Automatic Standby function to reduce no-load power consumption

## Applications

- Recreational vehicles
- Marine applications
- Solar power systems
- Industrial systems
- Mobile entertainment systems
- Service vehicles
  - Remote homes

Description

The PSC2000-12-80 up to PSC3500- 24-70 Powersine Combi products are based on the latest generation Powersine inverter engine, which guarantees very reliable operation and huge output power reserves. The Powersine Combi also features a powerful intelligent battery charger and an ultra fast AC transfer switch. All this is combined in a very compact, yet installer friendly unit.

The Powersine Combi offers many innovative features like AC Input Power Boost, which temporarily assists weak AC input sources when more power is needed than available. Another feature is AC Input Current Limit, which limits the maximum current consumed from the AC input source by the Powersine Combi in charger mode.

Furthermore, the Powersine Combi is equipped with a TBSLink port to connect to a remote control or to a Windows device running TBS Dashboard, for easy step by step configuration and readout.

Also available are two fully configurable 16A alarm relay outputs and two unique trigger inputs, that can convert external trigger commands into a number of Powersine Combi status changes.

Each Powersine Combi comes standard with a mounting kit, a temperature sensor, crimp terminals for DC cables and clear manuals.

#### Features

- True sinewave AC output
- Robust industrial design
- High surge power output • Powerful 4-stage two output
- battery charger • Power factor corrected AC input
- Fast 30A AC transfer switch
- AC Input Power Boost
- AC Input Current Limit
- Protected against high/low battery voltage, high temperature, overload, short circuit, high ripple voltage and low AC input voltage

- Automatic Standby function to reduce no-load
- power consumption
- Variable speed fan for silent operation
- Remote on/off capability
- Two programmable 250V/16A relays • Two trigger inputs
- Remote control capability via TBSLink • Easy to access connection bay for
- installing AC-, DC and control wiring CE certified

#### Applications

- Recreational vehicles
- Marine applications
- Solar power systems
- Industrial systems
- Mobile entertainment systems
- Service vehicles Remote homes
- 24 month warranty 24 month warranty

#### Accessories

• Universal Remote Control with LCD Basic Remote Control with LEDs

Basic Combi Remote Control, art # 5095210

#### Complete battery status at a glance

Operating your battery bank without good metering is like running your car without any gauges, although possible to do, it's always better to know how much fuel is left in the tank. Defining the amount of energy available in a battery is a complex task and very different to simply checking the water or fuel level inside a tank.

Many different factors influence the actual battery capacity, including its age, the intensity of the loads connected to the battery and the battery temperature. Although a Volt meter can give a rough indication of the battery's state of charge under some conditions, for more accurate and reliable status information an Expert battery monitor is the best choice.

#### More than just a State of Charge readout

Offering an accurate State of Charge readout is the primary function of an Expert battery monitor. But much more functionality is added to these products. All models are also showing battery voltage, charge-/discharge current, Amphours and the voltage plus rough State of Charge indication of a second battery bank.

The Expert Pro also adds a time remaining and a battery temperature readout to this. While the Expert Modular goes even further by adding a readout for power, operating/maintenance hours and the status of a third battery bank.

All Expert battery monitors are equipped with a potential free alarm contact, that can be configured to activate when a certain battery State of Charge or voltage level has been reached. This can be used to for example start a generator for charging the battery when a critical level has been reached.

The Pro and Modular models offer even more features which are explained on the next few pages. Each Expert model has specific properties, which enables us to offer a proper solution for a wide range of applications.

26

## Monitoring Lithium batteries

Although in some lead-acid battery applications people are still relying on a Volt meter for a rough battery status readout, this option is no longer valid when implementing Lithium batteries. A Lithium battery is known for its very flat voltage response against State of Charge. Therefore, monitoring such a battery only on voltage is not possible anymore. All Expert battery monitors are fully compatible with Lithium batteries and are being widely used in Lithium based applications for many years already.

#### Passive and Active shunts

The Expert Lite, Pro and Pro-hv are connected to a passive shunt for current measurement. This is a cost effective solution with a small footprint. It also offers the possibility to exchange the standard supplied 500Amp shunt with a smaller or larger capacity one.

The Expert Modular however, contains an active shunt. Since all measurement and control electronics are build inside the shunt, it will result in the highest accuracy. Information to the display unit is transferred over a digital cable connection instead of an analogue one, making it even more robust in noisy industrial environments. Additionally, the active shunt can also run in a standalone setup without display. This is an interesting option for systems that only require the battery data processed inside the shunt.

#### Description

Defining the amount of energy available in a battery is a complex task since battery age, discharge current and temperature all influence the actual battery capacity. All Expert battery monitors are equipped with high performance measuring circuits, which in combination with complex software algorithms, are used to exactly determine the remaining capacity of your battery.

In general, our entry model Expert Lite is focussed on a simple readout by utilizing most of the display area to show a large battery state of charge bar graph. Although it still offers great accuracy, the feature set is more limited compared to the higher end Expert Pro and Expert Modular. This makes the Expert Lite the ideal instrument for less technical end-users and relatively simple battery installations.

The Expert Pro is physically identical to the Expert Lite, but offers a larger amount of features and a more detailed display. Most of the additional features are very useful when installing the battery monitor in more advanced battery systems. Programming voltage or state of charge alarms more extensively, recalling certain history events or the capability to extend the input voltage range with an

• 500 Amp shunt included

• CE and e-mark certified

• 24 month warranty

V

optional voltage prescaler, are some of the additional features offered by the Expert Pro. The Expert Pro-hv is identical to the Expert Pro, with the exception of the input voltage range which is extended up to 70Vdc. All models are equipped with an internal programmable alarm relay, to run a generator when needed or to turn off devices when the battery voltage exceeds programmable boundaries. A passive 500A shunt is standard included in the package.

#### Features

- Read your battery bank like a fuel gauge
- Provides critical information about the status of your battery bank
- Displays voltage, current, consumed amphours, remaining battery capacity and time remaining (Pro only)
- Two battery inputs
- Large display with backlight
- Quick nut mounting construction
- Programmable alarm relay
- Shunt selection capability, enables flexible system integration
- Communication/expansion port (Pro only)
- History event storage (Pro only)
- Splash proof frontpanel

#### Applications

- Electric Vehicles
- Marine applications
- Solar power systems Industrial systems
- Electric forklifts
- Mobile entertainment systems
- Service vehicles
- Recreational vehicles
- Remote homes

Standard included 500A shunt

## This is a simple reading to show

Volts

the battery voltage under load, idle or charge. It is a quick reflection of the state of your battery, but does not really let you know the true battery condition.

#### Time Remaining

Smart software calculates the time remaining in your battery based upon the current load. This can be used as a good guide to when your battery has reached the discharge floor and must be recharged.

ſ

#### Amps

The Amp reading is an excellent way to check the load intensity on your battery. It allows you to minimize the current draw of non essential loads, or to check if your battery is actually being charged.

#### Amp hours

Shows the accumulated amphours consumed from the battery over a set period of time. This value will start from zero again, after the battery has been fully charged.

#### Amps

The Amp reading is an excellent way to check the load intensity on your battery. It allows you to minimize the current draw of non essential loads, or to check if your battery is actually being charged.

#### Amp hours

Shows the accumulated amphours consumed from the battery over a set period of time. This value will start from zero again, after the battery has been fully charged.

#### Temperature

This reading is only available when an external temperature sensor is connected to the battery monitor and shows you the actual battery temperature.

## **Expert** Lite, Pro and Pro-hv

#### Accessories

#### **Professional Connection Kit 10m** art # 5055440

The Expert professional connection kit makes life easier during installation of your battery monitor. It contains all necessary items for a professional and safe connection of the Expert battery monitor to your battery and shunt.

USB Communication Kit (Pro/Pro-hv only) art # 5092100

This kit enables you to control, readout and configure the Expert Pro from your Windows PC. Another possibility is to use the PC as a datalogger to record all measured parameters for further analysis.

e-xpert lite

#### Temperature Sensor Kit 3m (Pro/Pro-hv only) art # 5055310

By connecting the temperature sensor kit to your Expert Pro or Expert Modular, the exact temperature of your battery can be determined, resulting in even more precise battery monitoring. Also available in 10m length.

#### RS-232 Communication Kit (Pro/Pro-hv only) art # 5055200

This kit enables you to control, readout and configure the Expert Pro from your Windows PC. Another possibility is to use the PC as a datalogger to record all measured parameters for further analysis.

#### 1:5 Active Prescaler Kit (Pro only) art # 5055511

The Expert Pro 1:5 Active voltage prescaler kit, extends the input voltage range of the expert pro to enable implementation in 48 VDC up to 120 VDC battery systems (maximum input voltage is 175VDC).

1200A/50mV Shunt Kit (Pro/Pro-hv only) art # 5055180

The Expert pro 1200A/50mV Shunt kit, can be used in applications where the battery current would exceed the maximum ratings of the standard supplied 500A shunt.

#### Technical specifications

## Expert Modular

#### Description

Defining the amount of energy available in a battery is a complex task since battery age, discharge current and temperature all influence the actual battery capacity. All Expert battery monitors are equipped with high performance measuring circuits, which in combination with complex software algorithms, are used to exactly determine the remaining capacity of your battery.

The Expert Modular is our latest generation, highly advanced battery monitor. It consists of an intelligent shunt and a remote control and display unit. The shunt has a Grid Optimized footprint for perfect integration with our DC Modular products. This advanced battery monitor not only shows the true state of charge of your battery system. It also offers a large amount of additional features to optimally supervise your battery system and control external equipment.

The Expert Modular is compatible with lead based and Lithium batteries (LiFePO4). This battery monitor can monitor up to three battery banks. The inputs for battery bank 2 and 3 can also be configured for other purposes, like midpoint voltage measurement, keyswitch input, setup lock or backlight control. The Expert Modular can measure DC currents up to 600Amps (500Amp continuous) and voltages up to 70Vdc. So any lead- or lithium based battery bank from 12V up to 48V can be monitored.

The installation time is minimal, requiring only one supply wire to the intelligent shunt base and a single 'QuickLink' cable between the shunt base and the control/display unit (CDU).

Additionally, the battery minus cable must be interrupted in order to insert the shunt into the high current circuit. The fused supply wire and the QuickLink cable are both included in the package, avoiding the need for a separate connection kit.

#### **Expert Modular highlights**

Special fiber reinforced base material offers excellent high temperature properties, good chemical resistance and high strength.

Voltage sense input for (main) battery bank 1. Also positive supply input for Expert Modular.

Voltage sense inputs for \_ battery banks 2 and 3. Or assignable to other functions.

Potential free 5A/30Vdc (1A/70Vdc) programmable alarm relay contact to control external equipment.

Large circular bar graph provides a clear battery state of charge indication. Smart display animations indicate whether the battery is being charged or discharged and by which intensity.

Simple three button interface allows easy parameter readout selection in normal operating mode and intuitive navigation through the setup menus.

# MENU expert modula Control & Display Unit

Active shunt module

#### Features

- Read your battery bank like a fuel gauge
- Provides critical information about the status of your battery bank
- Very simple 'plug and play' installation
- Displays voltage, current, consumed amphours, remaining battery capacity, time remaining and power
- Extensive alarm programming capability
- Three battery inputs
- Large display with backlight • Very small installation depth of display unit

- Programmable alarm relay
- Perfect integration with TBS DC Modular products
- QuickLink communication port
- History event storage
- Active shunt supports two display units or can also run stand alone
- Splash proof front panel of display unit • CE and automotive certified (EN50498)
- 24 month warranty

#### **Applications**

- Electric Vehicles
- Marine applications
- Solar power systems
- Industrial systems
- Electric forklifts
  - Mobile entertainment systems
- Service vehicles
- Recreational vehicles

disabled. This results in a clean

the bar graph. A perfect mode

for less technical end users.

Second parameter row By enabling the second parameter row, the user can scroll through the following battery parameters: Volt, Amp, Ah, time remaining, temperature and Watts. The second parameter row can be set to automatically hide after a while,

or to stay present permanently.

Standard view The image above shows the normal operating mode with the second parameter row display area that only shows the battery state of charge (%) and 

Standard included active 600A shun

Ultra low loss custom made shunt module can handle 500A continuously.

Stainless steel studs, nuts and washers for optimal corrosion resistance.

Dual QuickLink port for connection to the Control & Display Unit or other accessories.

Input port for optional battery temperature sensor.

Multi purpose indicator provides status, error and battery state of charge information (3 colours).

Compact round Control & Display Unit with splash proof front panel, large backlit display and only 36 mm installation depth.

> Permanent large digit battery state of charge (%) indicator.

Second parameter row allows an additional parameter to be shown along with state of charge (%). During setup, this row will also show a clear textual explanation of each function.

• +

expert modular

battery monitor

+B2

Easier setup During function setup, status or history readout, each parameter is clearly explained using scrolling text in the display. This will make it a lot easier to browse through the Expert Modular menu, without having to consult a list of parameter numbers.

Alarm indications When an alarm is activated (for example due to a low battery state of charge), the alarm bell icon will be lit and an explanation about the type of alarm will scroll through the display. An audible alarm can be enabled as well for additional attention.

<sup>1)</sup> When input +B1 is only used for supply and +B2 for main battery voltage measurement, the input voltage range for the main battery is 1..70Vdc <sup>2)</sup> +/- 600A is the maximum rating for 20 minutes. The continuous input current range is +/- 500A

34

Note: the given specifications are subject to change without notice.

The Expert Modular active shunt base has a Grid Optimized footprint. This enables perfect system integration with busbars and fuseholders from the TBS DC Modular product lineup. The picture on the left shows a nice solution to avoid stacking all battery negative return cables on the single "System side" stud of the shunt.

## DC Modular high current busbars, fuseholders and contactors

#### Modular DC power protection and distribution solutions

Due to the ever increasing complexity of electrical DC systems onboard of boats, vehicles or in stationary applications, there is a growing need for a uniform set of products that significantly improves the installation time and flexibility. The TBS DC Modular product range offers a perfect solution for this. It contains a wide range of high current busbars, fuseholders, contactors and interconnection materials. Compared to more traditional and often incompatible DC distribution products, the DC Modular system offers many innovative features.

#### Create space saving arrangements of different DC Modular products

All DC Modular products carrying the Grid Optimized Footprint logo, are easy to cluster along with each other. This results in a considerable reduction of the mounting footprint, offering greater flexibility to installers and allowing installation in tight spaces.

The common interconnection height enables quick and easy combining of multiple products using optional link plates. Besides reducing the installation time by avoiding the use of assembled interconnection cables, it will also increase the safety and efficiency of the high current link.

#### Only the best materials

All DC Modular products are equipped with stainless steel studs, washers and nuts for optimal corrosion resistance. Tin plated high purity copper busses provide maximum conductivity, reducing heat and improving efficiency. The base material used for the DC Modular products, is made from a special fiber reinforced compound. This material offers excellent high temperature properties, good chemical resistance and high strength. This focus on the highest quality materials, ensures long lifetimes in harsh environments. All DC Modular products are designed and assembled in The Netherlands.

## Compatibility with the Expert Modular

The DC Modular product range is also a perfect companion for the TBS Expert Modular battery monitor. The footprint of this advanced battery monitor fits perfectly into the DC Modular grid, allowing optimal integration with the busbars and fuse holders.

#### Switching high current loads with the Remote Battery Switch

A recent addition to the DC Modular lineup is the Remote Battery Switch (RBS). This is an intelligently controlled 500A contactor that can switch voltages up to 60Vdc. Due to its magnetically latching construction, the RBS draws no current from the battery in between switching actions. This makes it an ideal part to use as a low voltage disconnection relay for battery loads. The RBS can be controlled locally with switches on top of the device, or remotely through the control wiring by a panel switch, battery monitor or BMS. We have of course made the RBS compatible with our DC Modular grid, so that very compact clusters of RBS products and other parts can be made to fit into tight installation spaces.

#### Professional fuseholders deserve safe high quality fuses

Too often we have seen things go bad due to the use of cheap 'no-name' fuses. Our own tests have demonstrated that a reasonable amount of low cost fuses on the market today, are not performing according to their specifications. This can vary from great deviations between the specified and the actual melting currents versus time, up to fuse housings almost catching fire when exposed to continuous rated current levels. The use of such fuses must obviously be avoided, since these are installed to protect against fire or equipment damage in the first place and not to become a safety hazard itself. For these reasons, TBS is an authorized dealer of A-brand Littelfuse. We stock a wide range of values from the MEGA, ANL and Class-T fuse families. This enables us to offer our customers a reliable and safe circuit protection package.

Premium quality Busbars, **Fuseholders and Contactors** 

#### DC Modular highlights

Easy in-system connection access due to top locked covers by convenient thumb screws.

Special fiber reinforced base material offers excellent high temperature properties, good chemical resistance and high strength.

Smart terminal design allows dual mirrored cable lug connections.

Top sides of transparant covers are equipped with recessed locations to properly add custom labels.

Robust transparent covers with breakouts to allow wire access from any direction.

Tin plated high purity copper busses provide maximum conductivity, reducing heat and improving efficiency.

Stainless steel studs, nuts and washers for optimal corrosion resistance.

Transparent polycarbonate cover with break-out side skirts at each side, for easy cable entry.

Multiple fuseholders and busbars can be connected to each other with the optional link plates.

The optional adapter plate allows a mixture of high- and low power cables to be connected to the same stud.

Smart terminal design allows dual mirrored cable lug connections.

Application example of a compact DC Modular cluster containing the Expert Modular active shunt, a 3-Stud Busbar and two Fuseholders.

## High current Busbars

#### Description

The DC Modular high current busbars are used to distribute high DC currents to a number of connected cables, or other DC Modular family members.

The solid and compact design, as well as the possibility to link up multiple busbars on a fixed grid, make these products the best choice for all professional DC power systems. The high current busbars are available with M8 or M10 stud sizes.

#### 5 stud Busbar

<sup>1)</sup> Higher voltages may require additional safety measures

#### Features

- Stainless steel studs, nuts and washers for optimal corrosion resistance
- Tin plated high purity copper busses provide maximum conductivity, reducing heat and improving efficiency
- Special fiber reinforced base material offers excellent high temperature properties, good chemical resistance and high strength
- Unique grid optimized footprints allow space saving arrangements of multiple products
- Common interconnection heights for easy combining of multiple products using link plates
- Robust transparent covers with breakouts to allow wire access from any direction
- Smart terminal design allows dual mirrored cable lug connections
- Easy in-system connection access due to top locked covers

| . Current | Max. Voltage <sup>1)</sup> | Stud size | Dimensions             |

## **Insulated Studs**

#### Description

The DC Modular single and dual insulated studs are ideal parts to extend cables, add power taps or form termination end-points.

The solid and compact design, as well as the possibility to link these up with other DC Modular family members, make these products the best choice for all professional DC power systems. The insulated studs are available with M8 or M10 stud sizes.

#### Single Insulated Stud

## Features

- Stainless steel studs, nuts and washers for optimal corrosion resistance
- Special fiber reinforced base material offers excellent high temperature properties, good chemical resistance and high strength
- Unique grid optimized footprints allow space saving arrangements of multiple products
- Common interconnection heights for easy combining of multiple products using link plates
- Robust transparent covers with breakouts to allow wire access from any direction
- Top sides of transparant covers are equipped with recessed
- locations to properly add custom labels (Dual insulated stud only)

**GRID** OPTIMIZED FOOTPRINTS

• Smart terminal design allows dual mirrored cable lug connections • Easy in-system connection access due to top locked covers

## **Fuseholders**

#### Description

A wide range of fuseholders are available in the DC Modular lineup, covering fuse Amp ratings from 35A up to 600A.

Fuseholders are offered for the Mega®, ANL and Class-T type of fuses, providing solutions for a wide range of applications. The solid and compact design, as well as the possibility to link up multiple fuseholders on a fixed grid, make these products the best choice for all professional DC power systems.

#### Mega Fuseholder

| Model               | Art #   | Grid size              | Fuse rang |

#### Features

- Stainless steel studs, nuts and washers for optimal corrosion resistance
- Tin plated high purity copper busses provide maximum conductivity, reducing heat and improving efficiency
- Special fiber reinforced base material offers excellent high temperature properties, good chemical resistance and high strength
- Unique grid optimized footprints allow space saving arrangements of multiple products
- Common interconnection heights for easy combining of multiple products using link plates (except Mega and ANL (300A) fuseholders)
- Robust transparent covers with breakouts to allow wire access from any direction
- Smart terminal design allows dual mirrored cable lug connections
- Easy in-system connection access due to top locked covers (except Mega and ANL (300A) fuseholders)

## **Contactors - Remote Battery Switch**

#### Description

The DC Modular Remote Battery Switch (RBS) is a smart high current magnetic latching contactor, that can handle continuous DC currents of up to 500Amps. The RBS can easily be installed in an engine room or battery compartment, while being controlled from a more convenient location by a small panel mounted switch. But the RBS can for instance also be controlled by a battery monitor or managed Lithium battery.

Besides controlling the RBS remotely, buttons positioned at the top also provide a way to open or close the main contact locally. For external control, the RBS is equipped with a 5 wire interface cable. It can be configured to accept two wire or single wire ON/OFF commands for optimal flexibility.

#### Technical specifications

C Due to the magnetic latch construction, the DCM-RBS draws virtually no current in the ON or OFF state. A current draw only exists shortly (500ms max) when changing the state of the contact. <sup>2)</sup> Using the top side buttons, one can manually override the switch state as commanded through the control wires. A dedicated 'On/Standby' button also allows the user to put the DCM-RBS in a standby mode with open contact. In this mode any command from the control wires and/or manual override buttons are ignored.

Very compact setup of DCM-RBS. Class-T fuseholder and 5xM10 busbar

## Accessories

#### Description

Due to the common interconnection heights, smart space saving arrangements of multiple DC Modular products can be made by linking these together using the optional Link Plates.

We have managed to offer only three Link Plate sizes to create all possible combinations. All Link Plates are compatible with M8 and M10 studs. Additionally, we have equipped some Link Plates with two M4 screws to provide convenient connection points for smaller cables.

For this purpose only, we are also offering an Adapter Plate which allows a mixture of high and low power cables to be connected to the same stud. The Adapter Plate can be used on M8 and M10 studs and offers four connection points for smaller cables.

#### Features

• Tin plated high purity copper busses provide maximum conductivity, reducing heat and improving efficiency

- Stainless steel M4 screws and washers provide convenient connection points for smaller cables
- Compatible with M8 and M10 studs

#### Link Plate 41 mm

## Other products

#### A wide range of products to complement your power system

As independent electrical systems are becoming increasingly more complex nowadays, more accessories and smaller electrical devices are needed to complement these systems. Although some of these products may individually also provide the perfect solution for a small simple system.

TBS is offering a growing number of such products, which currently consists of different DC to DC converter solutions, Automatic Charging Relays (or Battery Separators), Battery Protect Relays and Battery Isolators.

#### DC to DC converters

TBS is offering a wide range of DC to DC converter products with various functionalities to offer the right solution for your application. There are models equipped with or without an isolation border between the DC input and output, plus models with battery charging capabilities. Additionally, the DC to DC converter line-up can be divided into Step Down versions (input voltage is higher than output voltage) and Step Up versions (input voltage is lower than output voltage). All converters are built using robust high efficiency switch mode technology making these suitable for a wide range of application environments, like automotive, marine and industrial systems.

#### Automatic Charging Relay (or Battery Separator)

The TACR-160 is a smart 12V/24V-160A mechanical relay that is primary used to combine two different batteries together, when one of the two batteries is being charged. This allows both batteries to be charged by a single charging source. As soon as the charging is stopped, the TACR-160 will automatically disconnect both batteries from each other again. This avoids that one battery will discharge the other.

Besides this main functionality, the TACR-160 can also act as a remote controlled DC switch or only allowing a load to be connected to the battery when it is being charged. A remote switch can also be used to temporarily combine the auxiliary battery with the starter battery, in order to increase the available power to for example start an engine.

The TBP devices can also be controlled remotely by a switch, to manually disconnect the load from the battery when a system is for example left unattended for a prolonged time. An alarm output can be used to connect to a buzzer that activates once an under voltage is detected.

¢

# DC to DC Converters

TDC, TDCi and TDCi-CH Series

DC to DC converters are used to convert from one voltage level to another. In our lineup we are offering models with 12V, 24V or 48V inputs and 12V or 24V outputs at different power levels. The utilized switch mode technology ensures high efficiency low loss operation. Careful design and over dimensioned components ensure trouble free operation for many years. Our DC to DC converter lineup consists of three different series, TDC, TDCi and TDCi-CH. Explained below are the specific differences between each series.

The TDC series are compact non isolated DC to DC converters and have an excellent price/performance ratio. These are available in Step Down and Step Up versions and can be used in applications where the DC input source share the same ground potential as the DC output load, like in most road vehicles. The TDCi series are isolated DC to DC converters that are also available in Step Down and Step Up versions. These models are ideal when no electrical connection between the input source and the output load is desired. The TDCi-CH series are based on the standard TDCi products, but are equipped with an automatic battery charging functionality. This enables the possibility to charge a battery connected to the output from another battery connected to the input. One of the benefits is that the charging voltage of the input battery does not need to be exactly the same as the charge voltage requirements of the output battery, allowing two different battery types to be connected together.

#### Features

Description

-----

- Supply 12V consumers from a 24V system or vice versa
- Supply 12V or 24V consumers from a 48V system
- Charge one battery from another
- (TDCi-CH only)
- Compact and easy to install
- Robust industrial design
- High efficiency
- Protected against low battery voltage, high temperature and overload
- CE certified
- 24 month warranty

#### Applications

- Marine applications
- Electric forklifts
- All types of road vehicles
- Machine building
- Process engineering
- Industrial systems
- Mobile entertainment systems
- Building automation

## Automatic Charging Relay TACR-160

#### Description

In a boat or vehicle with two battery banks, it is useful to be able to charge both banks while underway. The TACR-160 allows two battery banks to be charged from a single source, such as an alternator, but keep batteries isolated when not charging. This is to avoid that one battery bank discharges the other. Additionally, if one battery bank becomes depleted anyway, there will be a charged bank available for emergency starting.

Besides the main functionality of automatic battery combining or separation, the TACR-160 can also act as a remote controlled DC switch or only allowing a load to be connected to the battery when it is being charged. A remote switch can also be used to temporarily combine the auxiliary battery with the starter battery, in order to increase the available power to start an engine.

#### Features

#### Automatically combines batteries during charging, isolates batteries when discharging or at rest

- Bi-directional operation
- Automatic system voltage detection (12V/24V)
- Forced ignition combine by external switch
- Use as voltage dependent switchBattery/accessory protection against
- high voltages
- CE certified
- 24 month warranty

#### **Applications**

- Road vehicles Marine applications
- Hybrid generators

#### **Technical specifications**

## **Battery Protect Relays**

TBP-60 and TBP-200

A TBP Battery Protect Relay protects your batteries from non essential loads before the battery is completely discharged. Causing damage to batteries and potentially a shortage of cranking power to start your engine. These (solid state-) relays also protect connected electrical appliances against over voltage. The battery load is disconnected whenever the DC voltage goes beyond 16V (12V mode) or 32V (24V mode).

The TBP products are microprocessor controlled and contain 10 user selectable programs for different disconnect and reconnect voltages.

A TBP relay can also be controlled remotely by a switch, to manually disconnect the load from the battery when a system is for example left unattended for a prolonged time. An alarm output can be used to connect to a buzzer that activates once an under voltage is detected.

#### Features

- Protects your battery from being discharged too deeply
- Protects battery loads against high voltages
- Remote switch connection
- Alarm output
- 10 programs available for different disconnect / reconnect voltages
- CE certified
- 24 month warranty

#### Applications

- Recreational vehicles
- Service vehicles
- Marine applications
- Industrial systems

#### Technical specifications

| Parameter                       | TBP-60                | TBP-200                 |
|---------------------------------|-----------------------|-------------------------|
|                                 | art # 5074100         | art # 5074200           |
| Operating voltage               | 12Vdc / 24Vc          | lc (auto detect)        |
| High voltage disconnect         | 16V (12V mode)        | / 32V (24V mode)        |
| Maximum load / shutdown current | 6065A                 | 200210A                 |
| Maximum surge current           | 120A                  | 480A                    |
| Voltage drop                    | 0.15V @ 60A           | 0.13V @ 200A            |
| Current consumption             | 4mA (output active) , | / 2mA (output inactive) |
| Shutdown delay at overload      | 5 sec. (auto recon    | nect after 1 minute)    |
| Measurement accuracy            | ±2% (voltage)         | / ±20% (current)        |
| Disconnect / reconnect voltages | 12V mode:             | 24V mode:               |
| (10 user selectable programs)   | 10.5V / 12.0V         | 21.0V / 24.0V           |
|                                 | 10.0V / 11.5V         | 20.0V / 23.0V           |
|                                 | 9.5V / 11.5V          | 19.0V/23.0V             |
|                                 | 11.3V / 13.3V         | 22.6V / 26.6V           |
|                                 | 11.5V / 13.8V         | 23.0V / 27.6V           |
|                                 | 10.5V / 12.8V         | 21.0V / 25.6V           |
|                                 | 11.5V / 12.8V         | 23.0V/25.6V             |
|                                 | 11.8V / 12.8V         | 23.6V/25.6V             |
|                                 | 12.0V / 13.0V         | 24.0V / 26.0V           |
|                                 | 10.0V / 13.2V         | 20.0V / 26.4V           |
| Protection class                | I                     | P66                     |
| Dimensions                      | 82 x 65 x 41 mm       | 120 x 112 x 61.0 mm     |
| Weight                          | 0.2 kg                | 0.7 kg                  |
| Connections                     | M6 + 6.3 mm fastons   | M10 + 6.3 mm fastons    |
